Description:

Preventative care and screening services are important to promote wellness and prevent disease. Coverage of preventive service by health plans is contingent on several regulatory requirements. The Affordable Care Act (ACA) requires individual and group health plans to cover in-network preventive services and immunizations without cost sharing (e.g., deductibles, coinsurance, copayments) unless the plan qualifies under the grandfather provision or for an exemption. The ACA requires coverage of high-value preventive services. Plans covered by these rules must offer coverage of a comprehensive range of preventive services that are recommended by physicians and other experts without imposing any cost-sharing requirements. Specifically, these recommendations include:

- Evidence-based preventive services: The U.S. Preventive Services Task Force (USPSTF), an independent panel of scientific experts, ranks preventive services based on the strength of the scientific evidence documenting their benefits. Preventive services with a "grade" of A or B, like breast and colon cancer screenings, screening for vitamin deficiencies during pregnancy, screenings for diabetes, high cholesterol and high blood pressure, and tobacco cessation counseling will be covered under these rules.

- Routine vaccines: Health plans will cover a set of standard vaccines recommended by the Advisory Committee on Immunization Practices (ACIP) ranging from routine childhood immunizations to periodic shots for adults.
- Health plans must cover preventive care for children recommended under the Bright Futures guidelines, developed by the Health Resources and Services Administration (HRSA) with the American Academy of Pediatrics. These guidelines provide pediatricians and other health care professionals with recommendations on the services they should provide to children from birth to age 21 to keep them healthy and improve their chances of becoming healthy adults. The types of services that will be covered include regular pediatrician visits, vision and hearing screening, developmental assessments, immunizations, and screening and counseling to address obesity and help children maintain a healthy weight.
- The HRSA-supported Women's Preventive Services Initiative which provide guidance on evidence-based services specifically for women. The HRSA-supported health plan coverage guidelines, developed by the Institute of Medicine (IOM), will help ensure that women receive a comprehensive set of preventive services without having to pay a co-payment, co-insurance or a deductible

This preventive services coverage requirement applies only to people enrolled in job-related health plans or individual health insurance policies created after March 23, 2010.

In addition, if your plan is "grandfathered," these benefits may not be available to you. These services are also only covered at no cost to the member if provided by in network providers.

Lastly, if a preventive service, such as a cholesterol screening test, as part of an office visit to monitor a known medical condition, the plan can require you to pay some costs of the office visit, if the preventive service is not the primary purpose of the visit, or if your doctor bills you for the preventive services separately from the office visit.

Coverage for preventive care services other than those mandated by ACA is dependent on benefit plan language. For example, many benefit plans specifically exclude immunizations that are for travel or to protect against occupational hazards and risks. They may also cover preventive eye exams not mandated by the ACA. Please refer to the applicable benefit plan language to determine benefit availability and the terms, conditions, and limitations of coverage. Services not covered under preventive care services may be covered under another portion of the health plan.

As part of preventive coverage, it is important to note that preventive or screening services typically represent Services performed in the absence of signs or symptoms a disease or illness are consider. This is considered primary prevention. Services performed to identify risk for worsening of conditions or to monitor a disease state are not covered as preventive.

For services to be covered as preventive, your doctor must bill claims with preventive codes. If a preventive service identifies a condition that needs further testing or treatment, your regular copays, coinsurance, or deductibles may apply.

Policy Statement and Criteria

1. Commercial Plans

U of U Health Plan covers preventative services in compliance with stipulations of the Affordable Care Act and the member Summary of Plan Description (SPD).

2. Medicaid Plans

Coverage is determined by the State of Utah Medicaid program; if Utah State Medicaid has no published coverage position and InterQual criteria are not available, the U of U Health Plans Commercial criteria will apply. For the most up-to-date Medicaid policies and coverage, please visit their website at

<http://health.utah.gov/medicaid/manuals/directory.php> or the [Utah Medicaid code Look-Up tool](#)

CPT/HCPCS codes covered by Utah State Medicaid may still require further evaluation to determine medical necessity for coverage.
